ABSTRACTED-PUB-NO: JP 73004462B

BASIC-ABSTRACT:

A small quantity of foaming agent is added to a granular moulding resin mixture which is used as a colour batch or master batch and the mixture is moulded and expanded or extruded as a hollow body and cut at least one end and cooled and solidified. Thus the colour batch or master batch is given the same apparent specific gravity as the granules of the resin raw material with which it is mixed in a predetermined ratio and the mixture is conveyed pneumatically.
